PROFESSIONAL SUMMARY

Aspiring Associate Product Manager with hands-on AI product-operations experience at a venture-backed edtech (Unacademy Group). I work on AI/GenAI product ideas from problem framing and user flow design to prototype direction and evaluation. Published NLP researcher, provisional-patent holder, and Google Adversarial Nibbler AI red-teamer. Strengths: product thinking, user journey mapping, AI evaluation, and cross-functional execution.

EXPERIENCE

Product Operations Intern | AI-Enabled Learning Product *Airlearn (Unacademy Group), Bangalore | Nov 2025 – Present*

- Validate content quality, learner flow, and production readiness for AI-powered language-learning modules before release, reducing inconsistencies that reach the live app.
- Review Figma lesson flows, scripts, and app-ready modules to surface UX issues, content mismatches, and learner drop-off points.
- Partner with content, design, AI, and operations teams to convert raw lesson inputs into structured in-app learning experiences.

Artificial Intelligence Intern *Infosys, Bangalore | Mar 2024 – Jun 2024*

- Designed and directed a vision-language pipeline (DETR + GPT-3.5) that auto-generates narratives from images.
- Engineered structured prompts for scene-to-story generation, improving narrative relevance across diverse image inputs.
- Owned end-to-end workflow design using Python, Hugging Face Transformers, and the OpenAI API.

AI PRODUCT PROJECTS

Brain Tumor Detection & Clinical Report Generator *Provisional Patent Filed | Apr 2025*

- Conceived and architected an AI medical-imaging product (provisional patent, Nov 2025): MONAI U-Net segmentation of MRI/CT scans paired with GenAI radiologist-style reports evaluated using Dice score during prototype testing.
- Designed the end-to-end Streamlit user flow from scan upload to segmentation to automated report; directed the implementation using AI tooling.

Code-Mixing & Code-Switching Detection | Published Research *Sep 2024*

- Framed the research problem and selected the model approach (SVM, CNN, LSTM, N-Gram) for multilingual text classification across English, Hindi, and Tamil.
- Achieved 91.5% accuracy (LSTM) using TF-IDF, FastText, and character n-grams; published and presented at an international NLP conference.

PRODUCT CASE STUDY

Mistakes Review Feature | Airlearn Product Case Study *May 2026*

Portfolio: v0-mkrishna.vercel.app/case-study

- Identified a learner-retention gap where mistakes were not converted into a structured review loop.
- Proposed a Mistakes Review MVP using spaced repetition, active recall, mistake grouping, and retry flows.
- Mapped proposed success metrics such as review open rate, completion rate, repeat mistake reduction, and D7/D14 retention.

SKILLS

Product: Product Thinking, User Journey Mapping, UX Review, Feature Prioritization, Product Documentation, QA Testing

AI Product: GenAI, LLMs, Prompt Evaluation, AI Safety & Red-Teaming, Model-Output Evaluation, AI Workflow Automation

Analytics: SQL, Excel, Google Sheets, Funnel Analysis, Retention, Engagement, Drop-off Analysis, Product Metrics

Tools: Figma, Streamlit, GitHub, OpenAI API, Hugging Face, Ollama

ACHIEVEMENTS

- **Provisional Patent Filed** AI-Based Brain Tumor Detection & Automated Report Generation System (Nov 2025).
- **Google Adversarial Nibbler** selected among ~150 students from 7,000+ applicants; red-teamed text-to-image models to identify safety risks and harmful-output patterns (Jan 2025).
- **Published and presented NLP research paper** at an international conference (Dec 2024).

EDUCATION

B.Tech, Computer Science & Engineering | Lovely Professional University | Jun 2026 | CGPA 6.5/10

Diploma, Computer Science & Engineering | Tamil Nadu Govt. Polytechnic College | 88.7%
