PROFESSIONAL SUMMARY

Product Operations Intern at Airlearn (Unacademy Group), owning an end-to-end production and release workflow for an AI-powered learning product across four cross-functional teams. Shipped Emoline, a consumer app taken from PRD through build to Google Play closed testing. Google Adversarial Nibbler red-teamer, provisional patent holder, and published NLP researcher, bringing genuine curiosity about AI, HR tech, and B2B SaaS to Associate Product Manager roles.

EXPERIENCE

Product Operations Intern | AI-Enabled Learning Product *Airlearn (Unacademy Group), Bangalore | Nov 2025 – Present*

- Own the end-to-end lesson production pipeline across four cross-functional teams (Educator, Design, Creation, Technical), taking raw content through design, voiceover, QA, and final publishing.
- Review Figma flows, scripts, and app-ready modules to identify UX issues and learner drop-off points, converting those usage signals into clear requirements for content and design teams.
- Serve as stakeholder liaison and final decision-maker between content and engineering, resolving ambiguity to make the go/no-go publish call for every release.

Artificial Intelligence Intern *Infosys, Bangalore | Mar 2024 – Jun 2024*

- Designed and directed a vision-language pipeline (DETR + GPT-3.5) generating narratives from images, iterating on prompt design across repeated experiments to improve output quality.
- Owned end-to-end workflow design using Python, Hugging Face Transformers, and the OpenAI API.

PRODUCT PROJECTS

Emoline: Consumer Journaling App | Shipped, Google Play Closed Testing *Aug 2026*

- Defined the problem and wrote the PRD for a journaling app built around one constraint (one emotion + one sentence daily), deliberately scoping AI and chat out of V1 to isolate and test the core behavioral hypothesis before adding complexity.
- Selected the stack (React Native, Expo, Supabase), directed the build, and shipped v1.0.0 to Google Play closed testing, released v1.0.1 after incorporating tester feedback within the same test cycle, a full spec-to-launch-to-post-launch-iteration loop.
- Defined activation and retention metrics (first-entry completion, D1/D7/D30 retention) to evaluate early product engagement and guide future iterations, treating usage data as the deciding signal rather than assumption.

Brain Tumor Detection & Clinical Report Generator *Provisional Patent Filed | Nov 2025*

- Conceived and architected an AI medical-imaging product: MONAI U-Net segmentation of MRI/CT scans paired with GenAI radiologist-style reports, evaluated using Dice score during prototype testing.
- Designed the end-to-end Streamlit user flow from scan upload to segmentation to automated report; directed implementation using AI tooling.

Code-Mixing & Code-Switching Detection | Published Research *Dec 2024*

- Framed the research problem and selected the model approach (SVM, CNN, LSTM, N-Gram) for multilingual text classification across English, Hindi, and Tamil; achieved 91.5% accuracy (LSTM), published at an international NLP conference.

SKILLS

Product: Product Thinking, MVP Scoping, Product Requirements, Cross-Functional Collaboration, User Journey Mapping, UX Review, Feature Prioritization, Product Documentation, QA Testing

AI Product: GenAI, LLMs, Prompt Evaluation, AI Safety & Red-Teaming, Model-Output Evaluation, AI Workflow Automation

Analytics: SQL, Excel, Google Sheets, Funnel Analysis, Retention, Engagement, Drop-off Analysis, Product Metrics

Tools: Figma, Streamlit, GitHub, OpenAI API, Hugging Face, Ollama, React Native, Supabase

ACHIEVEMENTS

- **Provisional Patent Filed** AI-Based Brain Tumor Detection & Automated Report Generation System (Nov 2025).
- **Google Adversarial Nibbler** selected among ~150 students from 7,000+ applicants; red-teamed text-to-image models to identify safety risks and harmful-output patterns (Jan 2025).
- **Published and presented NLP research paper** at an international conference (Dec 2024).

EDUCATION

B.Tech, Computer Science & Engineering | Lovely Professional University | CGPA 6.9/10

Diploma, Computer Science & Engineering | Tamil Nadu Govt. Polytechnic College | 88.7%
