PROFESSIONAL SUMMARY

Product Operations Intern at Airlearn (Unacademy Group), running the production and release workflow for an AI-powered learning product across educator, design, content and engineering teams. Took Emoline, a consumer journaling app, from PRD to a public Google Play launch. Google Adversarial Nibbler red-teamer, provisional patent holder and published NLP researcher, targeting APM and AI PM roles.

EXPERIENCE

Product Operations Intern | **Airlearn (Unacademy Group), Bangalore** *Nov 2025 – Present*

- Owned end-to-end delivery of AI-powered language-learning experiences, taking initial requirements to in-app publishing across educator, design, content and engineering teams.
- Ran the full production and release workflow for a character-writing practice feature, from educator coordination and design reviews to technical integration, issue resolution, final QC and publishing.
- Primary liaison between internal users and engineering for an AI-powered automation tool: gathered requirements, documented improvement requests and coordinated iterations, then ran UAT and gave final sign-off before rollout.
- Drove AI voice-model improvements through stakeholder feedback, requirement clarification and output-quality testing.
- Reviewed Figma designs, AI-generated content and voiceovers to catch UX gaps and inconsistencies before release, and owned release readiness and go/no-go publishing decisions.

Artificial Intelligence Intern | **Infosys, Bangalore** *Mar 2024 – Jun 2024*

- Designed and directed a vision-language pipeline (DETR + GPT-3.5, Hugging Face, OpenAI API) generating narratives from images, iterating on prompt design to improve output quality.

PRODUCT PROJECTS

Emoline: Consumer Journaling App | **Live on Google Play** *Aug 2026*

- Defined the problem and wrote the PRD for a journaling app built on **"one emotion + one sentence"**, keeping V1 deliberately small to test the core behavioral hypothesis.
- Chose the stack (**React Native, Expo, Supabase**), directed the build, ran closed testing and launched publicly on Google Play.
- Set up **PostHog** for product analytics and user tracking around **activation (first-entry completion) and D1/D7/D30 retention**, then used those insights and user feedback to ship a post-launch update.

Clearance: OAuth Approval Guides for AI-Agent Builders | **Live** *Nov 2026*

- Conceived and shipped a tool that shows AI-agent developers how hard OAuth app approval is with providers like Gmail, Slack, Shopify and HubSpot: timelines, blockers, and which steps need a human; 12-guide library plus on-demand guides in ∼2 minutes.
- Designed a Research, Test, Write, Score agent pipeline where the LLM must cite a source for every fact, plain code probes real OAuth endpoints, and each claim is labelled tested, sourced or inferred.

Brain Tumor Detection & Clinical Report Generator | **Provisional Patent Filed** *Nov 2025*

- Conceived and architected an AI medical-imaging product pairing MONAI U-Net segmentation of MRI/CT scans with GenAI radiologist-style reports (evaluated via Dice score); designed the Streamlit flow from scan upload to automated report.

SKILLS

Product: PRDs & Product Requirements, MVP Scoping, Feature Prioritization, User Journey Mapping, UX Review, Stakeholder Management, Cross-Functional Collaboration, Release Management, UAT & QA Testing, Product Documentation
AI Product: GenAI, LLMs, Prompt Evaluation, AI Safety & Red-Teaming, Model-Output Evaluation, AI Workflow Automation
Analytics: SQL, Excel, Google Sheets, Funnel Analysis, Retention, Engagement, Drop-off Analysis, Product Metrics
Tools: PostHog, Figma, Notion, Streamlit, GitHub, Supabase, React Native
AI Tools: ChatGPT, Claude Code, Codex, OpenAI API, Hugging Face, Ollama

ACHIEVEMENTS

- **Google Adversarial Nibbler:** selected among ∼150 students from 7,000+ applicants; red-teamed text-to-image models to identify safety risks and harmful-output patterns (Jan 2025).
- **Published NLP research:** code-mixing and code-switching detection across English, Hindi and Tamil (91.5% accuracy, LSTM); presented at an international conference (Dec 2024) and published in GIJET (2025).

EDUCATION

B.Tech, Computer Science & Engineering | Lovely Professional University | CGPA: 6.9/10 *July 2026*
Diploma, Computer Science & Engineering | Tamil Nadu Govt. Polytechnic College | 88.7% *May 2023*
